We completed the iteration retrospective on Monday, November 5th.

Start:
- Bring what we learn to the table to teacher, sooner rather than later.
- Taking better notes, mainly when we are getting time with the customer
    - We should have some place where we all put our questions so we are ready when we get time with out customer.

Stop:
- The meetings are too close together.
- We spend too much time talking about random things irrelevant to our project
- Make sure we all have our assigned work completed before the meeting.

Continue:
- We did a good job of meeting.
- Finished the checklist completely, improved on last week's performance

Action Steps:
- By Wednesday everyone needs to get through string parsing.
- Create Google drive document for questions for Dr. Brandle
- We must have presentable working software by Monday
- We will meet on Wednesday and Sunday this week so the meeting are more spread out
- Crawling by Wednesday Limping by Sunday.
